

Installing Zenith u-he Hive MIDI Map

Due to u-he plugins not having an import MIDI map option, you will have to replace the default MIDI map.

1. Go to the data folder of Hive.

By default, (unless installed elsewhere) on MacOS this folder should be in “~/Library/Application Support/u-he/Hive/Support” and on Windows in “C:\Users\username\Documents\u-he\Hive\Support”.

If you don't know where this folder is located you can launch Hive and click on the presets button on the top right corner, then right click a preset to select “open in explorer/reveal in finder”.

This will point to the “presets” folder which is in the “u-he\Hive\Presets\Hive” folder.

Navigate to “u-he\Hive\Support” folder by going up three folders.

2. Copy and paste the “com.u-he.Hive.midiassign.txt” file that's provided within the “MIDI Maps/u-he Hive MIDI Map” folder in the Zenith archive to the “Support” folder of Hive.
