

Installing Zenith Serum MIDI Map

Due to Serum not retaining the custom MIDI map, you will have to replace the default MIDI map.

1. Launch Serum and click on the Menu to reveal the dropdown menu, then select "Show Serum Presets folder"

2. Select the "System" folder then go to the "MIDI CC Maps" folder.

3. Delete all the MIDI maps in this folder. (Please make a backup of the files before you delete them, especially if you had custom maps.)
4. Copy the "default.mmp" file that's provided within the "MIDI Maps/Xfer Serum MIDI Map" folder in the Zenith archive to the "MIDI CC Maps" folder of Serum.
5. Click on the "Menu" button in Serum once again to reveal the dropdown menu, this time select the "Load MIDI Map" option and then select the "default.mmp" file.
